

Mathematical Development

This week, we are going to think about measuring. We are going to measure how long objects are using sweets. Find some objects or pictures from around your house and place them on a flat surface to measure them. Place the sweets on top and count how many sweets long the object is. The beauty of using sweets for measuring is that you get to eat them afterwards!

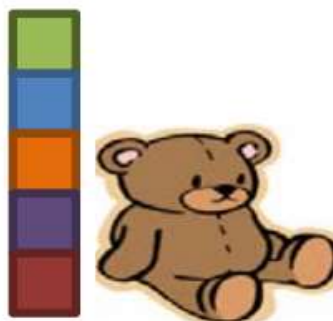

Which object is the longest / shortest? How do you know?

You could then put the objects you've measured into order by length, starting with the shortest.

Mrs Wolvin measured some objects using wooden blocks.

She thinks that this teddy is four blocks tall. Is she right? Why? / Why not?
