

# SCIENCE- FLOWERING PLANTS

WB 11.5.20

Mrs Warrington has been busy in her greenhouse planting different seeds. This week's science activity is to watch one video each day and create a diary about the progress of the seeds and what Mrs Warrington has done, how and why. You can be as creative as you like with your diary and it can include pictures, labels, sentences, whatever you feel happy and comfortable with. We are going to focus our diary entry on the growth of the cress. You can give yourselves an extra challenge and do diary entries for the apple pips and tomato plants but please focus on the cress diary first.

**Extra challenge:** - Can you create a glossary of any scientific words which Mrs Warrington uses? For example, germinate.
