

Maths worksheet 2-WB 4.5.20

1. Complete the multiplication.

$5 \times 9 = \underline{\quad}$ $9 \times 5 = \underline{45}$

$\boxed{5} \times 9 = \boxed{45}$ $9 \times \boxed{5} = \boxed{45}$

What is the product of 5 and 9? Write the multiplication to show this.

$\boxed{5} \times \boxed{9} = \boxed{45}$

2. There are nine batteries in a packet. How many batteries are there in 8 packets? Show your multiplication.

$9 \times 8 = 72$
There are 72 batteries in 9 packets.

Challenge: - There were eight flowers in a flowerbed, each with 9 petals. If one of the flowers I picked, how many petals will be left in the flowerbed?

$8 \times 9 = 72$ There are 72 petals on 9 flowers. If one flower was picked there would be 7 flowers. $7 \times 9 = 63$ so there would be 63 petals.

I could also record it this way $8 \times 9 - 9 = 63$
