

Lesson 2 – Drawing Line Graphs

\*If possible, use a ruler to make your graph as accurate as possible. Use the lines in your exercise book to help you. If you have a printer, print the sheet and draw the graph on the axis.

Here is the table of data showing the population of Twinkl-land from 1831 to 1911:

Year	1831	1841	1851	1861	1871	1881	1891	1901	1911
Population of Twinkl-land (millions)	1.2	1.3	1.4	1.4	1.5	1.5	1.6	1.7	1.8

Draw a line graph to show the data:

A Line Graph to Show \_\_\_\_\_

<p>1. What was the population of Twinkl-land in 1831?</p>	<p>2. In which decades does the graph show that the population of Twinkl-land stayed the same?</p>	<p>3. Using the line on the graph, what do you estimate the population to have been in 1876?</p>
<p>4. By how much did the population of Twinkl-land increase between 1881 and 1901?</p>	<p>5. What is the difference between the population of Twinkl-land in 1831 and in 1911?</p>	<p>6. In what year was the population of Twinkl-land 1.6 million?</p>
